EXPERIENCE

Software Consultant, Apogee / FitNxt

Jun 2026 - Present

- Auditing React Native frontend performance and UX flows, creating wireframes, and advising on product architecture for an AI-powered fitness app using LLM-based personalized workout generation.

Software Engineer II, Nordstrom

Nov 2023 - Jul 2025

- Led GCP/BigQuery migration as sole engineer on a hard deadline, rearchitecting Python/Airflow pipelines with parallelized Kubernetes pods, reducing runtime 96% (2 hrs to under 5 min) for 32GB+ datasets while maintaining zero downtime.
- Architected a plan-agnostic data ingestion system for Toolio integration, designing a reusable Airflow DAG template that standardized incremental plan file ingestion, read/write orchestration, and plan-specific transformation triggering, enabling new plan types to be onboarded without rebuilding pipeline logic.
- Owned stakeholder communication across the GCP migration for 5 product owners, building and maintaining a risk and timeline tracker, running cadenced standups, and proactively surfacing upstream blockers to keep delivery on track.
- Built Cypress E2E test suite covering complete planning workflows (data selection, live recalculations), validating client-side business logic and frontend/backend data parity; caught a precision bug (2 vs 4 decimal places in financial calculations).
- Led interactive architecture review sessions for operational datastore before presenting to the broader merchandising org; broke down PdM epics into estimated engineering stories and release documentation.

Software Engineer I, Nordstrom

Nov 2021 - Nov 2023

- Re-engineered Excel-based supplier finance workflows into a full-stack web application, owned React/TypeScript frontend, PostgreSQL schema design, and REST API contracts, eliminating 700+ hours of annual manual effort for 200+ planners.
- Built a full-stack supplier scenario planning application implementing a client-side calculation engine that handled cascading recalculations across 4-5 layers of metric dependencies per cell edit, enabling planners to model monthly scenarios and shift supplier negotiations from reactive year-end review to ongoing data-driven planning.
- Migrated manually configured AWS resources (S3 buckets, IAM roles, and access policies) into Terraform for version-controlled infrastructure in GitLab, reducing misconfiguration risk and standardizing provisioning across dev and production environments.
- Reduced annual cloud infrastructure costs by \$42K by analyzing Kubernetes resource utilization across 8+ services in New Relic, right-sizing CPU/memory allocations and configuring HPA thresholds.

PROJECTS

Milestone: Wedding Planning App, [Personal Project](#)

Present

- Building a full-stack wedding planning app (React/TypeScript/Node.js/Supabase) featuring a deadline-driven task scheduling engine that auto-surfaces tasks based on a wedding anchor date, eliminating timing decisions for non-expert users.

SKILLS

Frontend: React, Redux, TypeScript, JavaScript, AG Grid, Material UI, Figma, HTML/CSS, Web Accessibility

Backend & Data: Python, Node.js, REST APIs, PostgreSQL, BigQuery, SQL, Java Spring Boot, Kafka

Cloud & DevOps: AWS (S3, RDS, IAM), GCP (BigQuery, GCS), Airflow, Kubernetes, Docker, CI/CD (GitLab/GitHub), Terraform, Splunk, New Relic, OpenTelemetry

AI Tools: Claude API, Claude Code, agentic workflows

RECOGNITION

Nordstrom "Customer Obsessed" Award, 2025 - Recognized for GCP/BigQuery migration leadership and cross-functional stakeholder communication across the Merchandising org.

EDUCATION

App Academy, Full-Stack Software Development (1,000+ hours, project-based)

Jan - Jun 2021

University of Texas at Austin, B.S.A. Biology

Aug 2016 - May 2020
